

HIGH PRESSURE INJECTION SYSTEMS

FLOW METERS FOR HIGH PRESSURE INJECTION SYSTEMS

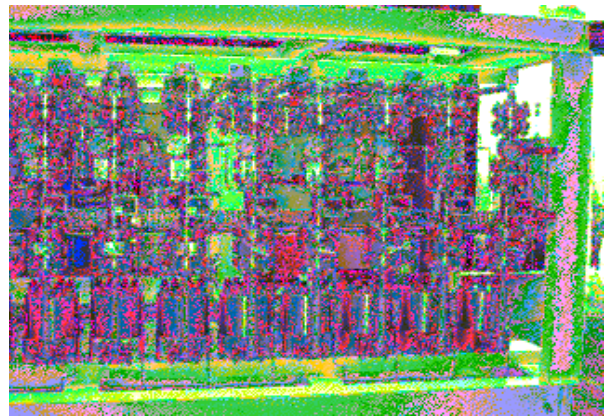

Flotech Solutions have had many year's experience in supplying specialist flow measurement equipment for high pressure injection systems. There are many practical reasons why Flotech has become the first choice for several North Sea operators. Our products are supplied to many of the system builders that specialise in high pressure injection systems.

The instruments that we supply are built to exacting specifications. They are available for pres-

ures up to 1200 Bar and can be produced in a wide range of materials to suit most process fluids. Existing system configurations can easily be accommodated with a large choice of fittings and connections. This makes retro fitting simple and straightforward. Screwed, flanged or hub are the normal connection choices. The flow meters have the added advantage of being able to function normally with small particulates in the fluid. These particulates would block a positive displacement meter. Local indication is the basic option. The units are also available with many different options. Including alarm output, 4-20 mA transmitter, I.S or explosion proof executions and epoxy coated or grit blast finish stainless steel housings.

With a wide variety of options, Flotech can provide a robust and effective solution for a difficult process.
